To:

STIC-Biotech/ChemLib

Subject:

09/445,517

In application 09/445,517, please perform a sequence search for SEQ ID NO: 14 in pending and commercial databses. Please provide me with a paper copy of first 50 hits.

Thanx.

S. DEVI, Ph.D. Primary Examiner AU 1645 Rems - 3C18

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
FILE REFERENCE: PUBJ 8002
CURRENT APPLICATION NUMBER: US/10/793,626
CURRENT PILING DATE: 2004-03-04
PRIOR APPLICATION NUMBER: 60/164,258
NUMBER OF SEQ ID NOS: 4472
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 1604
                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

--- FUNCTION: Selectively inhibits insulin-stimulated glucose
--- utilization and glycogen deposition in muscle, while not affecting
adipocyte glucose metabolism.
--- SUBCELLULAR LOCATION: Secreted.
--- SIMILARITY: Belongs to the calcitonin family.

SUBCELLULAR LOCATION: Secreted.
SIMIKARITY: Belongs to the calcitonin family.
                                                        utilization and glycogen deposition in muscle, while not affecting adipocyte glucose metabolism.
SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Canine IAPP CDNA sequence provides important clues regarding diabetogenesis and amyloidogenesis in type 2 diabetes.";

Biochem Biophys. Res. Commun. 169:502-508(1990).

-I. FUNCTION: Selectively inhibits insulin-stimulated glucose utilization and glycogen deposition in muscle, while not affecting adipocyte glucose metabolism.

-I. SUBCELLULAR LOCATION: Secreted.
-I. SUBCELLULAR: Delongs to the calcitonin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EMBL; X59998; CAA42616.1; -; mRNA.

Nishi M., Chan S.J., Nagamatsu S., Bell G.I., Steiner D.F.;
"Conservation of the sequence of islet;amyloid polypeptide in five mammals is consistent with its putative role as an islet hormone.";
Proc. Natl. Acad. Sci. U.S.A. 86:5738-9742(1989).
-!- FUNCTION: Selectively inhibits insulin-stimulated glucose utilization and glycogen deposition in muscle, while not affecting adipocyte glucose metabolism.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the calcitotin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryoča; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
